Comments /notes on tonight's mission and this interpretation: Tonight's flight was done by N350SM Tenax Scanner. Interpretation started using the EventPolygon pulled from NIFS on 6/10/22 at 2000 MDT that was heat perimeter from a Kolab flight earlier in the day. Interpreted acres totaled 303,180 acres (6,285 acres growth since last IR flight on 6/7). Intense heat was found across the southern fire edge, with scattered heat interior in south. Isolated heat was mapped in the central fire and north interior. NOTE: There is a small fire with some intense heat on it approx 11 miles southwest of the south end of fire. Not sure if this is part of this fire. IRWIN ID {E1D21D55-9C7A-4C8D-9532-0888C740A195}
