Comments /notes on tonight's mission and this interpretation: Tonight's flight was done by N350SM Tenax Scanner. Interpretation started using the EventPolygon pulled from NIFS on 6/14/22 at 2100 MDT. Interpreted acres totaled 317,676 acres (5,985 acres growth since last IR flight). Intense heat was found in some areas along the southern fire edge, with scattered heat mostly in the southwest portion of the fire. Isolated heat was mapped throughout the fire polygon but concentrated mostly in the southern portion of the fire, the central and northern portion of the fire has much less fire activity, IRWIN ID {E1D21D55-9C7A-4C8D-9532-0888C740A195}
