FIRE BEHAVIOR OUTPUTS

GENERAL: Main fire progression will continue to be in the West Zone to the north and east. Minimal to no forward fire spread expected in the East Zone. Make sure lookouts have a good view of the fire were areas of interior smokes are visible and there is a continuous canopy. Past fire history has shown reburn through the crowns and with the winds the potential for reburn is high. Expect the fire to become very active after 1400hrs. and continue through the evening until the winds subside.
If fire were to become established, outside the lines or you are supporting IA. Expect moderate rates of spread single and group tree torching and short range spotting 400ft.
If afternoon thunderstorms develop keep eyes out for new starts and expect dramatic changes in wind speeds and direction.

Night no forward progression is expected.

1000hr fuels are at 6%FM and are receptive to spots

Probability of Ignition 90-100%

SPECIFIC:

DIV YY: No forward fire progression expected. Keep a heads up for hold over heat that could be a source of spotting.
DIV VV: No forward progression is expected. There are still sources of heat near the perimeter. Rollout will be the biggest potential for fire getting across the line. Any fire established outside the lines will burn back towards the black or flank run below the black.

DIV TT, OO, LL: The fire is not expected to affect these three Divisions during this operational period.

AIR OPERATIONS: Minimal smoke impacts to air operations. Afternoon thunderstorms have the potential to shut down air operations.

SAFETY

Most of the fire is situated on extremely steep slopes assess your work area for rollout potential.
