

Creating Map Collections

**This guide was written with the latest version of Avenza Maps, make sure you have the latest version to utilize collections and this guide. [Version 4.0.2(201.3) on iOS and Version 4.0.3(157) on Android]

A collection is similar to a folder in that you can group certain maps together as you choose, however, the key difference is that a collection will allow you to automatically shift from one map to another while in the Map View based on your location/movement, rather than having to open each individual map manually. In addition to switching between maps based on location/movement, you can also pan/zoom between maps*

**The ability to pan/zoom between maps in a collection depends on the maps included, as well as the map scales used. Functionality may vary depending on the maps and scale used.*

Android

To create a Collection:

1. From the My Maps screen, tap 
2. Select 'Add Collection'
3. Name the folder accordingly and select 'OK' to confirm

To populate a Collection with maps:

1. Long press on a map to turn on Edit Mode
2. Checkmark the map(s) you want to include in the collection
3. Select the 'Move to Folder' button 
4. Select the Collection folder you wish to add the map(s) to

iOS

To create a Collection:

1. From the My Maps screen, tap 
2. Tap 
3. Choose Collection
4. Name the folder accordingly and tap 'OK' followed by tapping 'Done' in the upper right corner to finish

To populate a Collection with maps:

1. Tap 
2. Checkmark the map(s) you want to include in the collection
3. Tap 'Move to Folder' button 
4. Select the Collection folder you wish to add the map(s) to
