

**Fire Spread Probability Note:**  
 These results are acceptable and display the probability of the Boundary fire spreading across the landscape. The colors represent probabilities over the next 7 days, not perimeters. The areas in light blue to pink are low probabilities and represent rare event fires. The fire perimeter used for this model is based on a hand-digitized sketch of the operations map for 08-07. Ignitions are based upon VIIRS heat detections along the perimeter. Results assume a free burning fire. Management ignitions and suppression actions are not represented in the results.
