

INCIDENT ACTION PLAN

Fort Apache Agency

Incident Commander:

Operational Period:

--	--

INCIDENT OBJECTIVES (ICS 202)

1. Incident Name:	2. Operational Period: DAY	
BEAR	Date/Time From: 06/12/2024 0600 WED	Date/Time To: 06/12/2024 2200 WED
3. Objective(s):		
<ul style="list-style-type: none"> • Maintain the safety of firefighters and public as the highest priority using sound risk management • Provide protection to communities, infrastructure, values at risk, and contain the fire to the smallest size possible by utilizing point protection and direct or indirect control methods • Maintain and develop partnerships and relationships with cooperating agencies and stakeholders. • Minimize impacts to cultural, heritage, recreation, natural resource, and wildlife values by coordinating suppression actions with READs and AAs. • Provide initial attack response within TFR areas, specifically South of BIA 12 Rd, East of Salt River Draw, North of Cibecue Creek and G8 and B8 roads, West of Hwy 60 and G17 road. 		
Values at Risk		
<ul style="list-style-type: none"> • Community of Cibecue • Emory Oak patch • Cibecue Falls • Natural Springs • Cultural Sites • Heritage Resources 		
4. Operational Period Command Emphasis:		
Hot and dry. Stay hydrated - take care of each other.		
General Situational Awareness:		
Analyze the risk vs. gain of your assignment.		
Are you doing the right thing for your personnel and giving them a safe working environment? If yes, then proceed.		
If no, then reevaluate the assignment and provide solutions. LCES pre-identify multiple escape routes.		
5. Site Safety Plan Required? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>		
Approved Site Safety Plan(s) Located at:		
6. Incident Action Plan (the items checked below are included in this Incident Action Plan):

Spot Forecast for Bear...Fort Apache
National Weather Service Flagstaff AZ
125 PM MST Tue Jun 11 2024

.DISCUSSION...On Wednesday, expect another warm and dry day, with high temperatures near 100 degrees and afternoon humidity near 10%. On Thursday, warm and dry conditions continue, but southwest wind speeds will increase ahead of an approaching low pressure system. Thursday evening and overnight, there is a 30% chance of light rain showers, although the chance of receiving a wetting rainfall (>0.1) is less than 20%.

.WEDNESDAY...

Sky/weather.....Sunny.
Chance of pcpn.....0 percent.
Max temperature.....96-100.
Min humidity.....7-11 percent.
Wind (20 ft).....Variable 2-5 mph through 1000. After 1000,
southwest winds 5 to 10 mph with gusts to 15
mph in the afternoon.
LAL.....1.
Haines Index.....6 or high potential for large plume dominated
fire growth.
Max Vent Rate.....Excellent.
Clearing Index.....1777.
Mixing height.....10300 ft AGL in the morning increasing to 15300
ft AGL late in the morning.
Transport winds.....Northeast around 2 knots shifting to the south
5 to 10 knots in the late morning and early
afternoon, then shifting to the southwest late
in the afternoon.

.WEDNESDAY NIGHT...

Sky/weather.....Clear.
Chance of pcpn.....0 percent.
Min temperature.....Around 62.
Max humidity.....23 percent.
Wind (20 ft).....southwest
winds 5 to 10 mph with gusts to 15 mph until
1900. After 1900, down-slope/down-drainage 2-5
mph.
LAL.....1.
Haines Index.....6 or high potential for large plume dominated
fire growth.
Min Vent Rate.....Poor.
Clearing Index.....1.
Mixing height.....0 ft AGL.
Transport winds.....Northwest 5 to 10 knots shifting to the north
overnight.

HELICOPTER EXTRACTION OPERATIONS

The intent of helicopter insertion/extraction operations is to facilitate the movement of personnel to and from inaccessible areas. These operations are not meant to be a medical transport resource; life flight and ground transportation should always be ordered in addition to the extraction aircraft and crew.

ORDERING:

- On-scene EMT and/or Incident within Incident IC determines that an extraction helicopter is needed and places the order through the pre-established procedures:
 - Division Supervisor
 - Incident Communications
 - Dispatch Center
- When ordering extraction aircraft provide the following information:
 - Location (Lat/Long) of patient
 - Known Hazards
 - Wind Speed and Direction
 - Terrain
 - Incident Updates

SITE SELECTION:

- The helicopter crew will confirm the extraction location when they arrive on scene. However, a general rule is any clearing that is 10'x10' with visible sight lines to the sky is a suitable extraction site.
- If the terrain is steep, excavating a platform or shelf can make it easier for patient packaging.

QR Code-Short-haul Site Selection Video

CONSIDERATIONS:

- Short-haul and hoist are safe and efficient operations for extracting injured personnel of any severity including “Green” patients.
- Ensure area is clear of non-essential items, hazards, and personnel.
- Rotor wash may affect overhead hazards and blowing dust/debris can create brown out conditions or influence fire behavior.
- Aerial Supervision is valuable for coordinating aviation medevac/extraction missions and should be ordered if available and not currently present.
- The aircrew will make the final assessment of the mission. Always have a contingency plan in case a helicopter cannot complete the request.

DEFINITIONS:

Rescue Hoist: A cable winching device mounted to the helicopter that can lower/raise persons attached to a cable.

- Common cable lengths are 250-300 feet.

Short-haul: To insert or extract one or more persons suspended on a fixed line beneath a helicopter.

- Common short-haul line lengths are 100, 150, and 250 feet. The lines can also be connected for a longer line if the situation requires it.

Short-Haul Operations

CAPABILITIES

- During an operational Short-Haul the helicopter is capable of inserting Short-Haulers into an area with tight canopy cover and/or technical terrain.
- Haul line lengths range from 100 feet to 350 feet.
- Short hauler and/or medical gear can be delivered to the medical scene even if extraction by short-haul is not necessary.

ORDERING

- EMT or Medical Incident IC determines medical extraction is required.
- Follow local established procedures and/or Medical Incident Report (MIR) in the IRPG.
- Confirm aircraft type, call sign, estimated time of arrival and frequency.
- Give site selection information when ordering: hazards (i.e. ash, smoke, snags, aerial), tree height, terrain, and patient transport configuration (supine or seated position). Repeat hazards and give updated weather conditions as well as brief patient update to responding helicopter.

PROCESS: The helicopter will fly to the coordinates provided. They will make contact with ground personnel on scene with the patient using an identified air-to-ground frequency. The helicopter will complete a short-haul recon and size up, gather patient update information and then fly to a landing zone (LZ) to configure for short-haul operations. The helicopter will be monitoring the appropriate air-to-ground, air guard and victor frequencies. From this point, ground resources should only contact the helicopter in case of an emergency. During the insertion and extraction process ground personnel must be clear of the area.

ON SCENE: EXPECT THE FOLLOWING

- 1 or 2 rescuers (at least one qualified as an EMT or higher)
- Backboard (if needed and not already on scene)
- All equipment necessary for patient extraction

The Patient Extraction Bag accommodates most backboards.
-A patient on a backboard, TRS, SKED or litter will be inserted into the bag.

The Seat Harness is used for patients not requiring the use of a backboard.

- **Air OPS:** Maintain good communications with all aircraft have a visual and be concise with the task. Watch for low flying flights, and bucket work. LCES in place. This is not the 1st fire for these pilots, let them work and give positive feedback. Know the allowable.
- **Heat Index Risk:** For the work you are doing you should when its 90 degrees and above you should be at least 1 Qt an hour, 30 min work / 30-minute rest. Work in squads rotate work times. Adjust Tactics during the hot part of the day.
- **Dehydration/Hygiene:** As said above It is getting hotter and dryer and hotter, drink plenty of fluids. This is particularly important keeping your “system “up from getting sick or fatigued. This also goes with Hygiene, keep clean, wash your hands often and Shower. Keep a visual on your crews to ensure good health.
- **Terrain:** Steep terrain mixed with snags and PJ is already a bad mix. Mitigate, plan, and use sound judgement. As you navigate across the landscape keep focused on what is around you. Strong LCES and Situational Awareness. Mitigate all known hazards and communicate that to others.

“Firefighter and public safety is the priority.

All Fire Management Plans and activities must reflect this commitment.”

Federal Wildland Fire Policy, December 1995

Safety Officers, CC Christensen, and Gary Strictland

MEDICAL PLAN (ICS 206 WF)

Care for your blister:

Do not pop your blister or tear the skin on it. This could cause infection and slow the healing process. The following will help protect your blister area:

- **Wash your hands before you care for your blister.** This will help prevent infection. Use soap and water, or a gel-based hand sanitizer if soap and water are not available.

Cover your blister with a bandage, if needed. A bandage can help prevent the blister from being torn or popped. If the blister does break open, a bandage can will keep the area clean prevent infection.

- Use a bandage that is large enough to cover the entire blister. This will prevent the bandage from sticking to the blister. Your healthcare provider may tell you to use certain moist bandages or hydrogels.
 - You may need a bandage that absorbs well if your blister has a lot of fluid. You may be told to wear a second bandage for extra protection.
 - Carefully remove your bandage to care for the area. If the bandage sticks to your blister, pour saline on it. This will help the bandage come off more easily and prevent more skin damage.
 - Apply clean bandages as directed. Change your bandages when they get wet, dirty, or soaked with fluid.
- **Keep the blister area clean and dry.** Wash the area with soap or saline and water. Gently pat the area dry. Look for signs of infection, such as redness, swelling, or pus.

FINANCE

2024.bear.finance@firenet.gov

All paperwork will be submitted electronically, in **PDF format**, to Finance-this ensures the correct person will assist you. **If you are not able to email Finance directly, please utilize the copy trailer.** **PLEASE MAKE SURE YOUR NAME & RO# IS ON THE SUBJECT LINE OF ALL EMAILS.**

If you need help, please email us and we will answer you question(s) as soon as possible. Thank you for your patience!

If you are on an agreement of any kind make sure to send a copy direct to finance also. I.e. VIPR/EERA/CFRA etc and please send in your RO. Submit your CTR/Shift Ticket every 1-2 days.

Please ensure your phone number and an email address that you have current access to, is on your CTR's/ST's so any member of the finance section can contact you.

Field Maps

ACCESS & HELPFUL HINTS

1. If you do not already have a NIFC AGOL account, scan the QR code and fill out the form to request one. Follow instructions provided via email to complete account setup.

2. Download the Field Maps app to your mobile device (smartphone or tablet).

3. Email the Situation Unit at **2024.bear.situation@firenet.gov** and request to be added to the **2024 Bear AZ-FTA Mobile Edit Group**. Scan the QR code to quickly send the email. Include your AGOL username if possible.

4. Open the Field Maps app and locate the map to use for the incident.

Additional Notes:

- If you do not see the map after being added to the group, sign out and sign back in to Field Maps
- Download one or more offline areas while you are connected to WiFi or cell coverage if you will be working in areas without cell coverage
- Sync your offline area in the morning and evening when you return to WiFi or cell coverage

*Come by the Situation Unit at ICP
for assistance!*

MEDICAL PLAN (ICS 206 WF)

FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY.

FOR A MEDICAL EMERGENCY: IDENTIFY ON SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE

"MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.

Use the following items to communicate situation to communications/dispatch.

1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report)

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>	
Nature of Injury or Illness & Mechanism of Injury		<i>Brief Summary of Injury or Illness (Ex: Unconscious, Struck by Falling Tree)</i>
Transport Request		<i>Air Ambulance / Short Haul/HoistGround Ambulance / Other</i>
Patient Location		<i>Descriptive Location & Lat. / Long. (WGS84)</i>
Incident Name		<i>Geographic Name + "Medical"(Ex: Trout Meadow Medical)</i>
On-Scene Incident Commander		<i>Name of on-scene IC of Incident within an Incident (Ex: TFLD Jones)</i>
Patient Care		<i>Name of Care Provider(Ex: EMT Smith)</i>

3. INITIAL PATIENT ASSESSMENT: Complete this section for each patient as applicable (start with the most severe patient)

Patient Assessment: See IRPG page 106

Treatment:

4. TRANSPORT PLAN:

Evacuation Location (if different): (Descriptive Location (drop point, intersection, etc.) or Lat. / Long.) Patient's ETA to Evacuation Location:

Helispot / Extraction Site Size and Hazards:

5. ADDITIONAL RESOURCES / EQUIPMENT NEEDS:

Example: Paramedic/EMT, Crews, Immobilization Devices, AED, Oxygen, Trauma Bag, IV/Fluid(s), Splints, Rope rescue, Wheeled litter, HAZMAT, Extrication

6. COMMUNICATIONS: Identify State Air/Ground EMS Frequencies and Hospital Contacts as applicable

Function	Channel Name/Number	Receive (RX)	Tone/NAC *	Transmit (TX)	Tone/NAC *
COMMAND					
AIR-TO-GRND					
TACTICAL					

7. CONTINGENCY: Considerations: If primary options fail, what actions can be implemented in conjunction with primary evacuation method? Be thinking ahead.

8. ADDITIONAL INFORMATION: Updates/Changes, etc.

REMEMBER: Confirm ETA's of resources ordered. Act according to your level of training. Be Alert. Keep Calm. Think Clearly. Act Decisively.
