The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

INCIDENT: Rocky Fire | DATE: May 26, 2024 Operation Period: Day Shift

Risk vs Benefit

What Benefit ?

What Gain – What Potential Consequence?

What Risk ?

Continually evaluate the situation using the Risk Management Process, IRPG Page 1

Major Hazards and Risks:

- Vehicle Use: Continue to drive slowly with headlights on and wear seat belts.
- HWY 70 & Route 8 - Expect the continued high volume of traffic, Watch for traffic when coming onto the highway. Lookout for wildlife and livestock on the roads. Reduce speeds considerably when following another vehicle.
- Slips, Trips, and Falls: Take your time while traveling on foot. It's very easy to step in the wrong place and sprain an ankle or knee.

Narrative:

Fire Order of the Day – Give clear instructions and be sure they are understood

Transition – Ensure instructions on strategy and tactics are clear and understood.

Continue to practice LCES, monitor fire behavior, and always know where your escape routes are and that they lead to a safety zone. Continually update this information as locations and conditions change.

Medivac Procedures- Take time to review the IAP Medical Plan, and Medical Incident Report, know exactly how to proceed before the injury occurs. Know your location and where the closest landing zone is.

Take care of yourself. Get enough sleep, eat right, and drink enough fluids.

3. SAFETY ZONES AND ESCAPE ROUTES

NOT IDENTIFIED

Remember and Follow:

- *The 10 Standard Fire Orders
- *The 18 Situations That Shout Watch Out
- *The Common Denominators of Fire Behavior on Tragedy Fires
- *The Downhill Line Construction

Escape Routes:

- *More than one escape route
- *Scouted – soils, vegetation, slope
- *Timed – slowest person, fatigue, dozer speed
- *Marked – flagged for day and night use

Safety Zones:

- *Survivable without a shelter
- *Natural – clean burn, water, bare soil/rock
- *Manned – constructed sites, roads
- *Scouted for size and hazards
- *Close enough considering escape time needed
