Comments /notes on tonight's mission and this interpretation: Started interpretation using perimeter from NIFS event polygon, copied at 0200 MDT on 6/24/2024 Clouds covered part of the heat perimeter, primarily to the north and western part of the perimeter. Scattered heat and isolated heat sources throughout much of the interior, and there are large areas showing no heat. No areas of intense heat. One isolated heat source noted away from the fire perimeter, at the location of incident camp in the village.
