Date and Time Products Delivered to Incident: 6/10/2024 0335 MDT 6/10/2024 0400 MDT			
Comments /notes on tonight's mission and this interpretation: Downloaded the incident perimeter from NIFS at approximately 0200 hours MST on 6/10/2024. The heat perimeter was unchanged from the perimeter. Only one possible heat source was located on the westernmost portion of the perimeter. It was pretty faint but was mapped as a possible heat source. Very little to no heat remains on the Spring fire. Questions or concerns, please reach out to the interpreter using the contact information above.
