<b>Comments / notes on tonight's mission and this interpretation:</b> Tonight's mapping used the incident's wildfire daily perimeter pulled from NIFS at 2310 as a base for mapping.  Perimeter growth was primarily located in the fire's southeastern edge. The firing operation east of Jackass Ridge expanded east nearly three miles since last night with two distinct lobes of fire on the eastern edge and many disconnected fire polygons in the upper reaches of the diamond creek drainage.  In the Salmon River corridor the fire has progressed south to within 0.2 miles of Bird Creek.  Marginal growth was mapped along much of the fire's southern and southwestern edges.  No perimeter growth was observed on the fire's northern edge.
